InterstellarNet: Enigma incorporates the novelette “Championship B’tok,” a nominee for the 2015 Hugo award.

Humanity once feared that we might be alone in the universe. Now we know better. And we’ve learned there are worse things than being alone....

Contact with other intelligent races in nearby star systems seemed to have answered the age-old question at the center of the Fermi Paradox: Where is everybody? But when Joshua Matthews lands a new job that will give him access to vast new troves of data on the subject, suddenly everything goes wrong for him. Someone is sabotaging his life. Finding out why leads in astonishing and dangerous directions. It is as if he has tugged

on one thread, very gently—and caused everything humanity knows about its place in the universe to unravel, awakening the enmity of unsuspected ancient powers.

Volume Three of the saga that began with **InterstellarNet: Origins** and continued with **InterstellarNet: New Order**, is a thrilling tale with a large cast of humans, artificial intelligences, aliens, and a few beings that don't quite fit into any of those categories.... The plot is complex, with many an unexpected twist and turn, and the ending reveals answers to some of the most profound questions facing humanity.

This exciting adventure story has gained high praise already:

“When people talk about good hard SF—rigorously extrapolated but still imbued with the classic sense-of-wonder—they mean the work of Edward M. Lerner, the current master of the craft. *InterstellarNet: Enigma* is Lerner's latest gem, and it's up to his usual excellent standards; a winner all around.”

—Robert J. Sawyer, Hugo Award-winning author of *Red Planet Blues*.

“A breathtakingly richly realized vision of what tomorrow's civilization may look like—and the people who inhabit it.”

—Ben Bova, author of the *Grand Tour* series

“Edward M. Lerner's InterstellarNet is one of the most original and well-thought-out visions of an interstellar civilization I've ever seen.”

—Stanley Schmidt, Author of *Argonaut*.

“Yes, this is a hard science story, and yes, it's really, really good.”

—Kristine Kathryn Rusch Author of the *Retrieval Artist* series, on “*The Matthews Conundrum, Part One of InterstellarNet: Enigma*.”

[T]he incredible futuristic setting of the solar system was immensely fun to imagine as were all of the different worlds within it.... An intriguing science fiction novel that creates an unforgettable view of what the future could be.

—Kristi Benedict, Feathered Quill Book Reviews ([FeatheredQuill.com](http://www.featheredquill.com))

.... [A]n interesting variation of the standard solar civilization. There's a little bit of military SF, some intrigue, some wondrous revelations, and some gritty conflicts.

—Don D'Amassa, *Critical Mass Reviews* (<http://www.dondamassa.com/>)
